 Planetary Health Cluster

The Planetary Health Cluster is formed by five projects funded under the call HORIZON-HLTH-2023-ENVHLTH-02-01  
"Planetary health: understanding the links between environmental degradation and health."

The Planetary Health Cluster, launched in 2024, comprises five projects: GoGreen Next ([gogreennext.eu](http://gogreennext.eu)), SPRINGS ([springsproject.eu](http://springsproject.eu)), TULIP ([tulip-project.eu](http://tulip-project.eu)), MOSAIC ([mosaic-europe.eu](http://mosaic-europe.eu)) and PLANET4HEALTH ([planet4health.eu](http://planet4health.eu)).

Planetary health studies how environmental degradation impacts human health and all life on earth, and works to promote evidence-based policies that protect and restore natural systems for a sustainable future.

**Through joint deliverables, co-hosted events, and a shared strategy, these projects will work collectively to promote evidence-based policies that support improved global planetary health.**

Promote and disseminate our research on the effects of environmental degradation and its implications for planetary health.

Raise awareness and understanding of the impact of environmental degradation on human health and of the costs and benefits of action and inaction.

Increase dissemination through the cluster's network and communication channels.

Contribute to evidence-based decision-making and more effective EU and global policies.

Build capacity for planetary health research and policy development.

## Working Group 1: Science translation for policy and practice

Our goal is to bridge the gap between scientific research and actionable solutions for planetary health. We are undertaking interdisciplinary research that addresses policymakers' needs, promoting best practices, and fostering collaboration among scientists, policymakers, and practitioners. We endeavor to make complex environmental and health data more accessible, identify barriers to implementing science-based solutions, and propose strategies to overcome them through knowledge co-creation that effectively addresses policy, societal, and ecological needs.

## Working Group 2: Data and model-based solutions and indicators

We are working together to develop common approaches to data and metadata production, management, processing, integrity, quality and dissemination. Taking a common approach aims to enhance data sharing between the cluster projects and beyond, enable collaboration, and harmonize our efforts.

## Working Group 3: Communication and Dissemination

The cluster is undertaking a range of coordinated action to promote and disseminate our research, enhance public understanding of planetary health, and raise awareness about the health impacts of environmental degradation.

## Working Group 4: Planetary Health Interventions

We are collecting intervention-related research conducted by the cluster projects, exchanging knowledge on intervention and implementation sciences, and sharing best practices to develop and evaluate interventions.
